

Maximize catch and reduce fuel consumption with MLD Echo Sounder

Maintain desired distance to the seabed!

Upgrade your MLD Trawl Door with one or more altimeters

Suitable for SAS and TSS systems

Stay in full control of your trawl with our advanced systems.

Maintain a constant, preset distance from the seabed —even in tough conditions the system can escape oncoming obstacles.

Boost your catch, cut fuel costs, and protect your gear with precise seabed control for more efficient fishing and a stronger bottom line.

Tips for using the altimeter

(Sonar/height sensor)

Case 1

Pelagic fishing near the seabed

Escape function at e.g. 50 meters to avoid the net touches the bottom. Option for adding a forward-looking altimeter to avoid oncoming obstacles.

Case 2

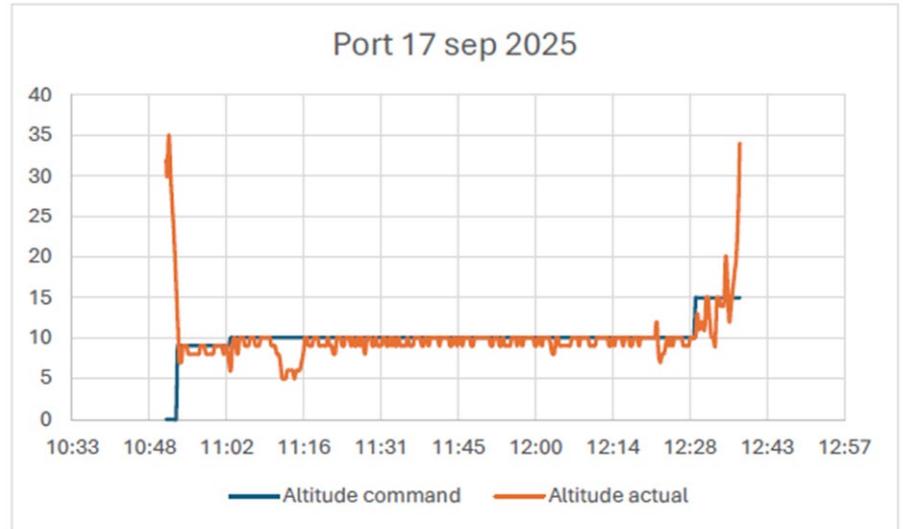

Semipelagic fishing just above the seabed

Maintain a fixed distance to the seabed. Add a forward-looking altimeter to avoid oncoming obstacles

Case 3

Semipelagic fishing in valleys and on ridges

Position the trawl to follow the ridge and dive into the valley and escape the valley with a forward-looking altimeter.

Backed by data

MLD trawl doors log data and transmit data to the onboard computer while fishing. When the trawl doors are in the gallows the entire log file is transmitted to the onboard computer via WiFi.

MLD Trawl Steering System

Achieve full control over your trawl position and improve fishing efficiency with our advanced system.

Dynamic adjustment of trawl doors in vertical and horizontal directions from the bridge while fishing.

Remote adjustments and automated functions ensure the MLD doors will be where you want them to be.

The MLD installation is designed to keep you prepared for future upgrades, the MLD Trawl Door Altimeter being one of them. By following the installation instructions, you can seamlessly integrate the altimeter along with any future MLD upgrades, ensuring you always stay ahead of the game.

Navigate toward optimized fishing and a stronger bottom line!

Now you know all the tricks for optimal fishing!
